

**WYDE Voice produces
the industry's
next generation
of High-Definition audio
conferencing bridges.**

The WYDE Voice high-performance products run on standard Intel processors using patented vDSP™ technology. The vDSP™ software based bridges are more scalable, efficient and cost effective than any current solutions on the market. While our technology is revolutionary, it is field tested. Our products currently support service providers that process over 10 million minutes of traffic daily. Using highly redundant, off the shelf Intel hardware, our solutions are simple to deploy and maintain.

SB - HD100

Our entry level product is designed to meet the needs of today's SMB market place. The SB-HD100 is a pure software product and will support up to 100 concurrent ports of real-time HD audio conferencing functionality. The product runs on off the shelf Intel hardware and is managed via a simple web-based user interface. The system will integrate with most existing authentication systems for account provisioning and provides a wealth of addition value added features over most existing conference service offerings. Full system ROI can be achieved in less than 12 months for most businesses.

SB - HD1000

Geared toward today's modern enterprise, the SB-HD1000 provides a turnkey appliance that will support up to 1000 concurrent ports of HD audio conferencing functionality. Using our award winning vDSP™ technology, the SB-HD1000 provides organizations with enterprise class features that rival any legacy products or services in an industry standard 2U footprint. The SB-HD1000 integrates seamlessly with your enterprise authentication mechanisms and corporate applications systems while providing a user friendly, web-based management interface which may be branded with IVR requirements customized to your specific needs.

SB - HD10000

The flagship of the WYDE Voice product line. The SB-HD10000 is designed to provide carrier class reliability and performance for today's Service Provider market. Architected from the ground up for 100% up time with N+N redundancy and utilizing our industry leading vDSP™ technology, the SB-HD10000 is the perfect solution to replace the industry's legacy hardware DSP based systems. The SB-HD10000 includes a rich set of API's that allow it to seamlessly plug in to existing service provider's offerings. Easy integration with existing billing infrastructures, seamless interaction with existing authentication systems, and broad ability to customize service, IVR, and management interfaces on per/user/customer basis, making the SB-HD10000 the natural choice to replace existing service provider bridges.

SB - HD100 / SB - HD1000 / SB - HD10000

Key Features:

- Scalable, software only, carrier grade solution on commodity servers
- No proprietary H/W, reduces risk and TCO
- Easy to deploy and manage remotely
- SIP based, the accepted standard for VoIP
- Extensive HD voice support (G.722, G.722.1, G722.2, (AMR-WB), iSAC, SILK)
- Integrates with OTS hard/soft phones for HD audio (Skype/Polycom/SNOM/AudioCodes/Gigaset/Cisco)
- Supports managed service deployments for a CSPs larger customer
- TDM support via commodity gateways or hybrid switch
- Extensive monitoring and diagnostics
- Integrates with existing authentication infrastructure
